Caring for your FW United FC Apparel

Fabrics we wear today are on the cutting edge of design. While this evolution gives us better fitting garments with flashier designs, they do have a specific care protocol necessary to prolong their life. Most polyester fabrics can be damaged from the sunlight, fabric pore blockage, and distress. To avoid early wear-out of your uniform, you will need to properly take care of it. So...what is the correct way to wash your puma gear: jerseys, warm-up, practice jerseys, and socks? When should you fill up your soccer ball? Follow the easy care guide below to maintain your gear and save money. We strongly recommend that all uniform gear (especially jerseys) ONLY be worn for games or practice and not to school or for playing around in the backyard. Warm-ups while more durable, should still have limited wear. The more your gear is worn outside of game situations, the quicker you can expect wear-out.

Washing your jerseys (Game and Practice):

- Use warm water ONLY
- Do Not Bleach
- Do Not Tumble Dry (Hang to dry instead)
- Do Not Iron (You may steam wrinkles if needed)
- Do Not dry clean

Washing your shorts (Game and Practice):

- Use warm water
- Do Not Bleach
- Do Not Tumble Dry (Lay flat to dry)
- Do Not Iron (You may steam wrinkles if needed)
- Do Not dry clean

Wash and wear guidelines for warm-ups:

- Use warm water ONLY
- Do Not Bleach
- Do Not Tumble Dry (Hang to dry instead)
- Do Not Iron
- Do Not dry clean
- Be sure to avoid sitting/ leaning on cement walls, or other bumpy surfaces to keep from getting snags and/or “pilling”

Washing game socks:

- Wash in warm or hot water
- Do Not Bleach
- Tumble Dry, LOW HEAT
- Do Not Iron
- Do Not dry clean

How to maintain your soccer ball:

- Size 5 and Size 4 balls should be filled to 8-12 psi, DO NOT OVER FILL!
